* Depending on model

Those, who are looking for a powerful thermographic camera to solve fundamental measurement and testing tasks in the fields of industry and science, that offers an impressive geometrical resolution will find the Imager[®] 7300 a perfect match. Its cooled **focal-plane array photon detector provides (640 \times 512) IR pixels** and a **pitch of 15 μm** at a constant active detector area. Users, who are testing very small structures on large-scale measurement objects, benefit from substantial plus in terms of efficiency compared to smaller detector formats. In addition, you can choose between **MCT and InSb** detectors.

The camera supports **recording and storing images and sequences with frequencies up to 1,200 Hz**. An internal trigger interface guarantees for precise, repeatable triggering of correspondingly fast processes. Two respective inputs and outputs are used to control the camera or to generate digital control signals for external devices. Depending on the character of the measurement and testing situation due to its modular design, most diverse thermographic software and high-quality lenses the Imager[®] 7300 is quite easy to adapt to the on-site conditions.
