

# E-Class Secure Remote Access Series

Secure remote access for the enterprise

## Easy, secure and clientless remote access for the enterprise

With maturing mobile technologies, booming global markets and heightened focus on disaster preparedness, remote access control has become a business imperative. IT is now mandated with providing secure remote access that is easy to use and cost-effective to implement. Client-based VPNs can be cumbersome to use and manage. Dell™ SonicWALL<sup>™</sup> Aventail<sup>™</sup> E-Class Secure Remote Access (SRA) delivers fullfeatured, easy-to-manage, clientless or thin-client "in-office" connectivity for up to 20,000 concurrent mobile enterprise users from a single appliance. E-Class SRA enhances productivity and business continuity with policy-enforced remote access to network resources from Windows<sup>®</sup>, Apple<sup>®</sup> Mac OS<sup>®</sup>, iOS, Linux<sup>®</sup>, and Google® Android™ devices. Built on the powerful SonicWALL Aventail SSL

VPN platform, E-Class SRA connects only authorized users to only accepted resources. When integrated with Dell SonicWALL Next-Generation Firewall as a Clean VPN™, the combined solution delivers centralized access control, malware protection, application control and content filtering. The multi-layered protection of Dell SonicWALL Clean VPN™ decrypts and decontaminates all authorized SSL VPN traffic before it enters the network environment.

This solution is a part of Dell SonicWALL E-Class—a line of premium, enterprise-class solutions offering outstanding protection and performance while delivering elegant simplicity and unparalleled value. The E-Class portfolio of products and services includes a comprehensive line of network security, email security and secure remote access solutions.

- Increases productivity
- Lowers IT overhead and total cost of ownership
- Easy to use from any endpoint
- Full iOS and Android support
- Robust mobile solution
- Access to all application platforms
- Remote support
- Eliminates routing conflicts
- Single access gateway
- Rapid set-up and deployment
- Easy-to-control with Unified Policy Management

### Features and benefits

### Increases productivity

E-Class SRA can be deployed across a wide range of environments and devices, including home PCs, kiosks, smartphones, tablets and unmanaged devices over wired and wireless networks. Dell SonicWALL Aventail SRA makes your users more productive by providing easy access to email, files, applications and more from environments—including Windows, Apple Mac OS, Linux computers and iOS and Google Android mobile devices.

# Lowers IT overhead and total cost of ownership

E-Class SRA lowers IT costs by enabling network managers to easily deploy and manage a single secure access gateway that extends remote access via SSL VPN for both internal and external users to all network resources—including webbased, client/server, host-based and back-connect applications like VoIP. E-Class SRAs are either clientless or use lightweight web-delivered clients, reducing management overhead and support calls.

### Easy to use from any endpoint

E-Class SRA technology provides transparent access to network resources from any network environment or device. An E-Class SRA provides a single gateway for all access and a common user experience across all operating systems—including Windows, Apple Mac OS and iOS, Google Android and Linux—from managed or unmanaged devices.

### Full iOS and Android support

SonicWALL Mobile Connect™, a single unified client app for Apple iOS and Google Android, provides smartphone and tablet users superior network-level access to corporate and academic resources over encrypted SSL VPN connections.

### Robust mobile solution

E-Class SRAs provide the most robust secure access solutions for mobile smartphones and tablets, featuring Session Persistence across office, home or mobile IP addresses without reauthentication.

### Access to all application platforms

Dell SonicWALL Aventail Smart Tunneling™ delivers fast and easy access to all applications—whether they are web-based, client/server, server-based or host-based—over a unique architecture that combines the application layer control of SSL with the reach of a Layer 3 tunnel.

### Remote support

Dell SonicWALL Secure Virtual Assist enables technicians to provide secure on-demand assistance to customers while leveraging the existing infrastructure.

### **Eliminates routing conflicts**

Adaptive addressing and routing dynamically adapts to networks, eliminating addressing and routing conflicts common with other solutions.

### Single access gateway

E-Class SRA gives network managers a single secure access gateway for all users, internal and external, to all resources with complete control. Administrators have even greater control over portal access, content and design with the newly enhanced Dell SonicWALL Aventail WorkPlace Portal

### Rapid set-up and deployment

All E-Class SRAs are easy to set up and deploy in just minutes. The redesigned Dell SonicWALL Aventail's Set-up Wizard provides an easy, intuitive "out-of-the-box" experience with rapid installation and deployment. SonicWALL Mobile Connect for iOS and Android unified client app is easily downloadable from the App Store<sup>SM</sup> or Google Play. Improved management workflow makes it much easier to understand and manage policy objects.

# Easy-to-control with Unified Policy Management

Dell SonicWALL Aventail Unified Policy™ offers easy object-based policy management of all users, groups, resources and devices, while enforcing granular control based on both user authentication and endpoint interrogation. Policy Zones can ensure unauthorized access is denied, or quarantined for remediation.

# Detect the security of any endpoint

# Robust interrogation for secure control of the endpoint

Only Dell SonicWALL Aventail End Point Control™ (EPC™) lets you enforce granular access control rules for Windows, Apple Mac OS and iOS, Google Android and Linux endpoints. EPC combines pre-authentication interrogation to confirm endpoint criteria such as anti-virus updates. Dell SonicWALL Aventail Policy Zones<sup>™</sup> apply detected endpoint criteria to automated policy enforcement. For example, a user's access may be quarantined—and redirected to remediation instructionsuntil a security patch is installed. Device watermarks allow access from a lost or stolen device to be easily revoked, based upon detection of

client certificates. Device Identification enables administrators to tie the serial or equipment ID number for a specific device to a specific user or group. Dell SonicWALL Aventail's Virtual Keyboard stops keystroke sniffers on untrusted endpoints. Dell SonicWALL Aventail Recurring EPC performs endpoint scans at user login and at administrator-defined intervals to ensure the ongoing integrity of any endpoint. End Point Control includes capabilities to determine if an iOS device has been jailbroken or an Android system has been rooted.

### Advanced EPC for ultimate protection

Optional Dell SonicWALL Aventail Advanced EPC combines granular endpoint control detection with superior data protection. Advanced Interrogator simplifies device profile set-up using a comprehensive predefined list of anti-virus, personal firewall and antispyware solutions for Windows, Mac and Linux platforms, including version and currency of signature file update. Dell SonicWALL Aventail Cache Control purges browser cache, session history, cookies and passwords. Dell SonicWALL Aventail Secure Desktop creates a virtual encrypted environment that prevents sensitive information from being left behind. Dell SonicWALL Aventail E-Class SRAs also block suspect email attachments in Outlook Web Access or Lotus iNotes, or block access to financial data or patient records. On E-Class SRAs, connections are closed by default, providing "deny all" firewall-style protection.

# Protect your enterprise resources with ease

### Streamlined policy management

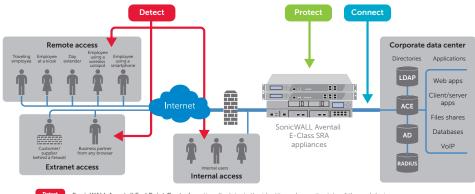

With its context-sensitive help and Set-up Wizard, an E-Class SRA solution is easy to set up and deploy. The extensible, object-based Dell SonicWALL Aventail Unified Policy™ model consolidates control of all web resources, file shares and client-server resources in a single location, so that policy management takes only minutes. Groups can be populated dynamically based on RADIUS, ACE, LDAP or Active Directory authentication repositories, including nested groups. E-Class SRAs support Single Sign-On (SSO) and forms-based web applications. Moreover, users can easily update their own passwords without IT assistance. In addition, Dell SonicWALL Aventail Policy Replication lets IT easily replicate policy across multiple appliance nodes, either in the same cluster or in a geographically distributed fashion. One-Time Password (OTP) support provides a built-in method to generate and distribute secondary factors, for

easy and cost-effective two-factor authentication. Administrators can associate OTPs by Realm for greater flexibility in authentication control.

### Intuitive management and reporting

The Dell SonicWALL Aventail Management Console™ provides a rich, centralized set of monitoring capabilities for auditing, compliance, management and resource planning. Optional Dell SonicWALL Aventail Advanced Reporting™ audits who accessed what enterprise resources,

at what time, from which remote location, using standard or custom reports that can be viewed from any web browser. Visual tools provide realtime information on system state and direct, intuitive options for managing system objects. Enhanced user monitoring features streamline auditing and troubleshooting of current and historical user activity. Administrators can easily view or filter activity by user, time, throughput, realm, community, zone, agents or IP address.

Protect
SonicWALL Aventail End Point Control continually detects the identity and security state of the end device
SonicWALL Aventail Unified Policy enforces devices access control, ensuring users access only to authorized applications
SonicWALL Aventail Smart Access and Smart Tunneling ensure easy, secure user access to all network resources

SonicWALL Aventail E-Class Secure Remote Access solutions provide secure access for all users, devices and applications.

# Connect users to resources—simply and seamlessly

# Broadest application access from the most endpoints

E-Class SRA appliances deliver intelligent access to web-based, client/server, server-based, host-based and backconnect applications such as VoIP. Dell SonicWALL Aventail SRAs work seamlessly across Windows, Apple Mac OS and iOS, Linux or Google Android devices, from desktops, laptops, kiosks, smartphones and tablets, as well as application-to-application. This significantly increases productivity, while reducing support costs. From the user's perspective, Dell SonicWALL Aventail Smart Access<sup>™</sup> dynamically determines and deploys the appropriate access method and security level based on the type and state of the device, user identity and resources needed. Zone-based provisioning enables administrators to extend control over what access agents are deployed based upon the remote user's End Point Control classification. Adaptive addressing and routing dynamically adapts to networks, eliminating conflicts. Smart Access streamlines installation and activation of any required agents on Windows devices according to Microsoft standards.

### Clientless web-based access or full "in-office" experience

Dell SonicWALL Aventail E-Class Secure Remote Access appliances offer both clientless browser-based access and full access to client/server and legacy applications from Windows, Mac and Linux environments. SonicWALL Aventail WorkPlace™ delivers a policy-driven, device-optimized web portal that provides easy access to web-based and client/server applications from desktops, laptops, smartphones and tablets, even from wireless hotspots and kiosks. Users can define shortcuts to frequently used resources. Workplace can be

customized with different logos and color schemes for partners and employees. Dell SonicWALL Aventail WorkPlace access is well suited for devices not managed by your organization. Dell SonicWALL Aventail Connect<sup>™</sup> access delivers an "in-office" experience for Windows, Mac OS, and Linux users, enabling full access to client/server and web-based applications and all other network resources. Enabled through a lightweight, web-deployable agent, or through an easily provisioned standard MSI installation. Dell SonicWALL Aventail Connect is ideal for full access from IT-managed devices that require strong desktop security, split-tunneling control and personal firewall detection. Dell SonicWALL Aventail Smart Tunneling offers a Layer 3 technology that supports UDP, TCP and IP protocols, and backconnect applications like VoIP. In NAT mode, no set-up of IP address pools is required.

### A solution customized to users' needs

Optional Dell SonicWALL Aventail Native Access Modules™ offer additional native access to Windows Terminal Services, VMWare View (using Dell SonicWALL Aventail OS) as well as native support for load-balanced Citrix farm environments via the WorkPlace Portal as an alternative to expensive Citrix nFuse implementations. Virtual Hosts provide clientless access to a wide range of complex web applications, including those using Flash and JavaScript.

### Most complete access solution for mobile devices

E-Class SRA Series appliances offer web-based and client-based access to critical network resources from iOS and Google Android devices, as well as email access from iOS, Android and Symbian devices, with complete security and control. Dell SonicWALL Aventail SRA solutions provide centralized management of all devices with granular access control and the ability to prohibit

access from the device if it is lost or stolen. Moreover, with Session Persistence, mobile users can have the flexibility to retain a current session as they switch between networks—on the go between office, commute, home and hotel—without needing to re-authenticate.

### Reliable high availability and flexibility

For added reliability, E-Class SRA appliances offer active/active high availability (HA) with integrated load balancing and active/active stateful failover on the SRA EX9000, EX7000 and EX6000, eliminating the added cost of a third-party load balancer. In addition, with an optional Dell SonicWALL Aventail Spike License Pack, you can temporarily and cost-effectively increase your remote user count to the maximum capacity of those E-Class SRA appliances for disaster recovery or planned business cycle peaks, whether it is a few dozen or a few thousand additional users.

#### The clear business choice

The Dell SonicWALL Aventail E-Class Secure Remote Access Series includes the award-winning EX Series of SSL VPN hardware and virtual appliances, offering your business the best solution for secure remote access control. With Dell SonicWALL, you can enhance your enterprise network security, increase your mobile workforce productivity for greater return on investment (ROI) and reduce IT overhead for a lower total cost of ownership (TCO). Dell SonicWALL's technology gives you flexible access options for disaster recovery and supports easy audits to help you comply with FIPS, Sarbanes-Oxley, HIPAA, Basel 2 and other regulatory requirements, even during unexpected business disruptions. And E-Class SRA appliances make an ideal replacement strategy for IPSec VPNs. From any business perspective, Dell SonicWALL is the easy choice for secure remote access.

### **Specifications**

Performance -	EX6000	EX7000	EX9000
